Supplements That Help Combat Pain and Inflammation

InflammaSaver®

Blend of 100% plant/herb-derived anti-inflammatory and antioxidant extracts, including aspirin like precursors, Boswellia, Ginger, Curcumin and others. Double to triple dosing was required for observable effect in fresh injuries or acute flare-ups of chronic problems. Onset slow, 2 to 3 days. With chronic problems in young, actively performing animals there was effect, roughly equivalent to 1 gram of phenylbutazone, at the high doses and again after a delay of 2 to 3 days.

Greater response was seen in older animals, particularly when the horse had pain/stiffness/disability that frequently required bute for control.

LaminaSaver® Lives Up To Its Claims

InflammaSaver®

Figuerola suggested we try a combination of their InflammaSaver with the LaminaSaver®. This combination was effective as well, although either way the daily cost is high.

Incredibly, despite the cost, every one who used this product agreed it was worth it since nothing else had produced equivalent results.
